Portfolio website: <https://taunku.github.io/Portfolio/>

PROFILE

Computer Science student with hands on experience developing cybersecurity tools, backend applications, and real time monitoring systems. Experienced with Python, Java, SQL, Linux, Git and cloud technologies with practical experience in intrusion detection, vulnerability scanning, log analysis, and backend development. AWS loud and Google Cybersecurity certified. Seeking entry level opportunities in software development, IT or cybersecurity.

TECHNICAL SKILLS

Languages: Python, Java, SQL, HTML/CSS

Cybersecurity: Intrusion detection, Vulnerability Scanning, Log Analysis, Risk Assessment, Security Monitoring

Backend and deployment: FastAPI, REST APIs, JSON, OOP

Cloud: AWS IAM, S3, Google Cloud

Tools & Systems: Linux, Windows, Git, Android Studio

Core Strengths: Debugging, log analysis, problem solving, teamwork, system analysis

PROJECTS

Hercules Security SaaS – Cybersecurity platform

Python, FastAPI, SQL, Rest APIs, Linux

- Developing a cybersecurity Saas platform for automated website nd application security assessment.
- Implemented user authentication, email verification, password reset, MFA, API keys, Team Functionality, Target Verification, Scan management and scan history.
- Built scanning and risk analysis components for identifying and classifying security vulnerabilities.
- Integrated scheduled scanning and billing infrastructure s part of the platform architecture.

Real-Time Intrusion Detection & Prevention System (Python)

Python, Linux, Security Monitoring

github.com/Taunku/real-time-intrusion-detection

- Designed real-time log monitoring engine using sliding-window anomaly detection
- Built behavioural risk scoring to detect burst traffic, directory scanning, and sensitive endpoint probing
- Implemented automated IP blocking simulation
- Developed live SOC-style dashboard using Rich
- Implemented structured alert logging for auditing and incident tracking

Web Log Intrusion Detection & Vulnerability Scanner

Python, Security Analysis, JSON

github.com/Taunku/VulnerabilityScanner

- Developed rule-based intrusion detection system with risk classification
- Implemented structured JSON reporting
- Built scanning logic to detect suspicious web traffic patterns
- Designed a system to analyse the web activity and provide actionable security information

School Management System (Team Project)

Java, OOP, Backend Development

github.com/Rootsinc23/project001

- Collaborated in backend development of administrative web system
- Implemented student registration and data management features
- Contributed to system organization, application logic and system structure

EDUCATION

BSc Computer Science — Regenesys University (2025 – 2027)

NSC (Matric) — Maragon Mooikloof (2024)

CERTIFICATIONS

- AWS Certified Cloud Practitioner
- Google Cybersecurity Professional Certificate
